☐

Cleaning robot

☐

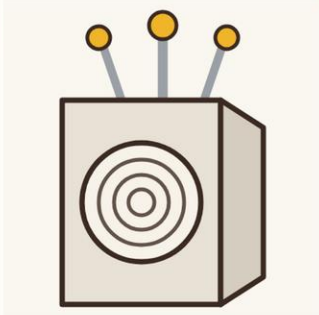

Lawn robot

☐

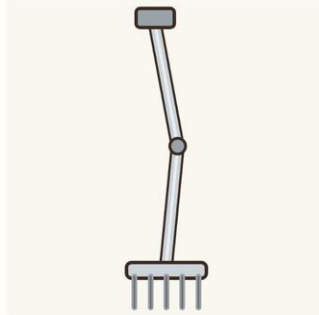

Measuring robot

☐

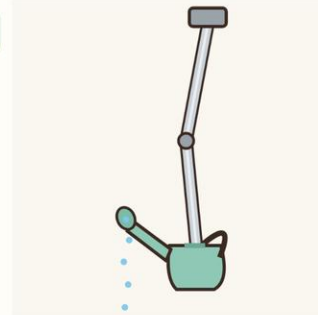

Water dispenser robot

☐

The speaking cube

☐

Robot arm with rake

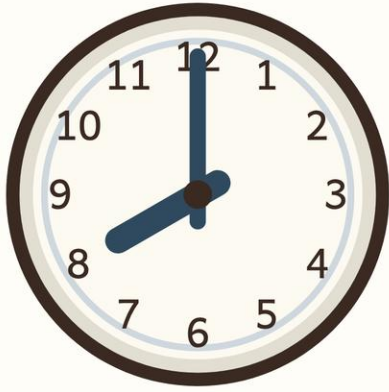

☐

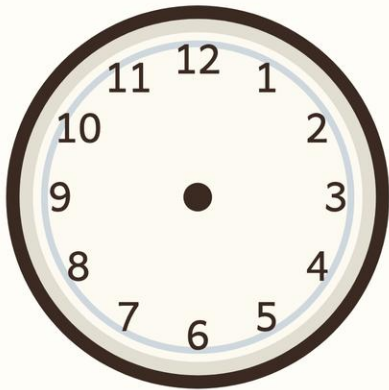

Robot arm with watering can

Tick the robots you found in the book.

What time is it?

You will find these times in the book again. Read the clock and write the time on the line. On the empty clocks you draw the hands yourself.

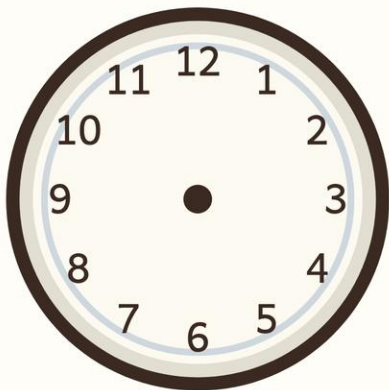

09:00

The clock has twelve numbers. The short hand shows the hour, the long one the minutes.

The clock at school

Four more times from the school day. Read them — or draw the hands yourself.

14:00

The clock has twelve numbers. The short hand shows the hour, the long one the minutes.

How this book came about

An author thought up this story. She told the story out loud — she did not type it — describing the pictures in her head.

Artificial intelligence helped with the writing, the drawing and the layout. It listened, made suggestions and drew. The ideas, the decisions and the responsibility lie with the human.

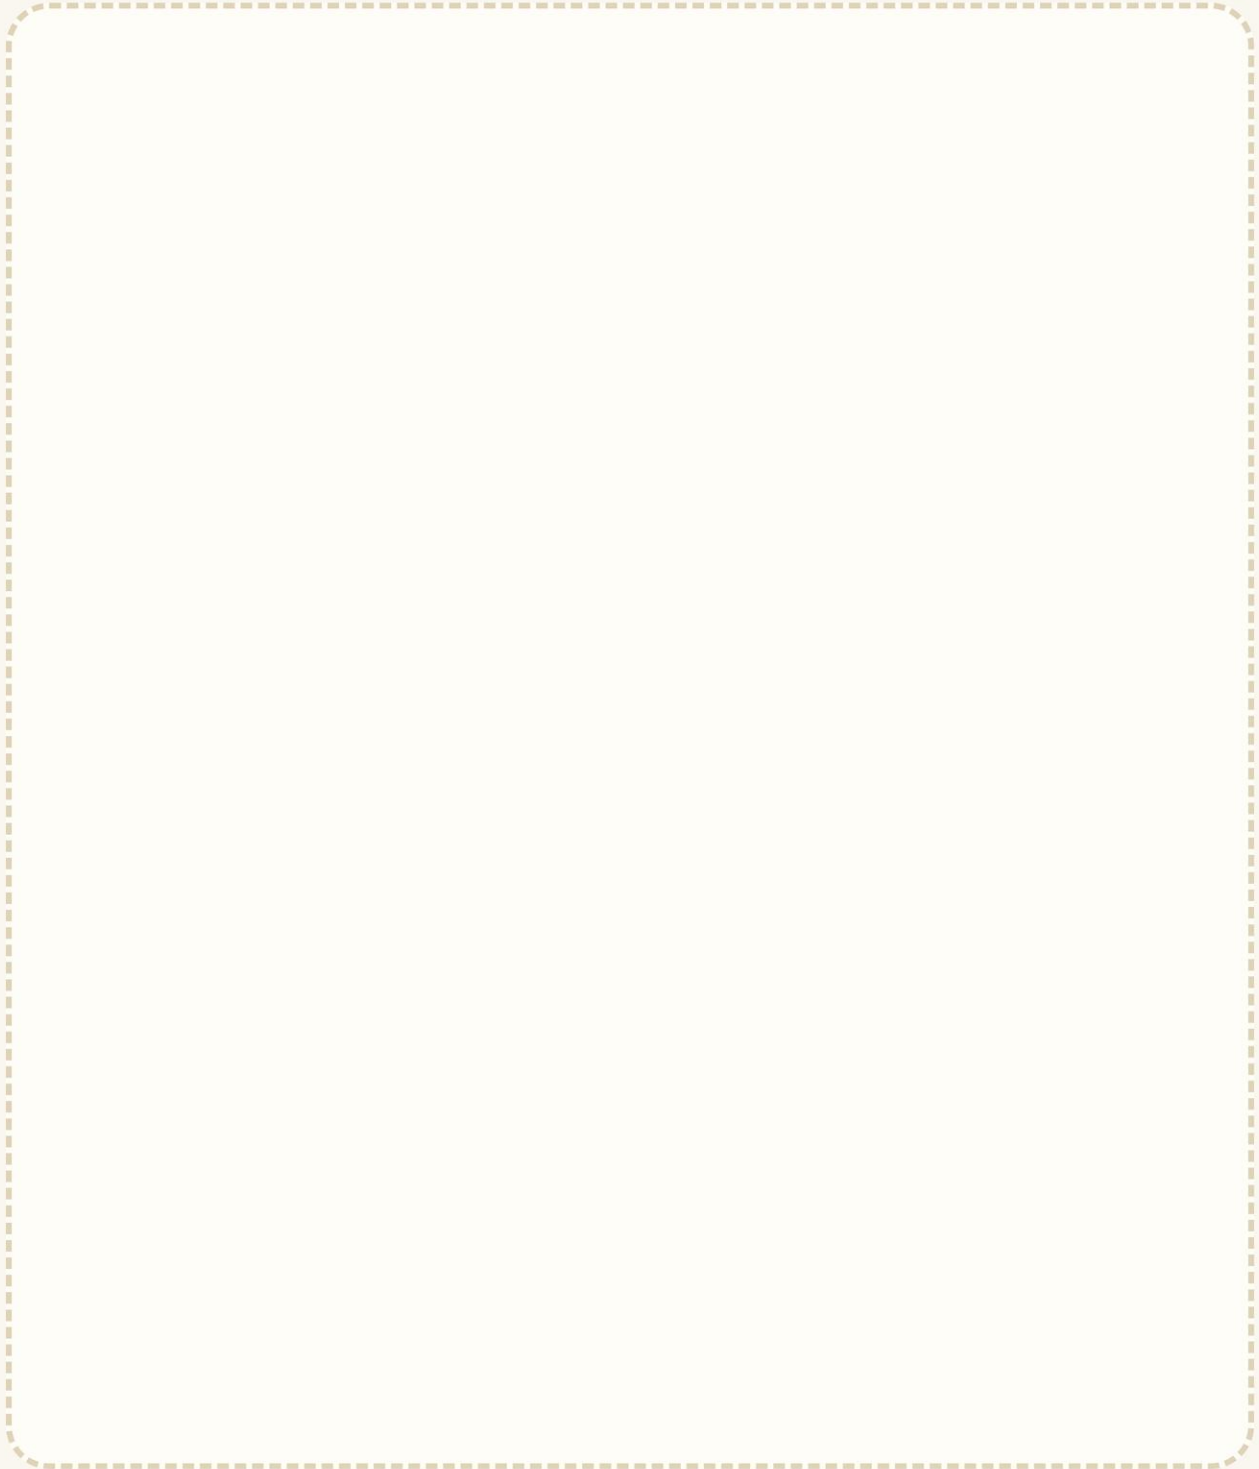

This book has a purpose: children growing up today should learn how to deal with robots. To the author it matters that people meet robots in the right way.

They should understand that robots carry out tasks and that a person has to control them. They act only according to a program inside them, and for safety there are special functions.

The job of robots is to help people. And they deserve respect. The artificial intelligence that helped with this book is a program too — not a person. Only then will people and robots live together peacefully.

For children from five to seven years.

For you to draw
